

# Save with ENERGY STAR

If you're looking to replace a home appliance, consider an ENERGY STAR® qualified model to save energy and money. ENERGY STAR is the international symbol of premium energy efficiency. Products that display the ENERGY STAR symbol meet or exceed government energy efficiency levels without compromising performance. The products that qualify to use this symbol are among the top energy performers on the market — in some cases surpassing Canada's minimum national energy efficiency standards by **as much as 60%**.

## Lower your energy bills with ENERGY STAR qualified products.

### Here are just a few examples:

- ENERGY STAR qualified high-efficiency natural gas tankless water heaters use up to 25% less natural gas than conventional water heaters.
- ENERGY STAR qualified televisions use about 40% less energy than standard TV sets.
- ENERGY STAR qualified clothes washers are 30% more efficient than required by the Government of Canada's Energy Efficiency Regulations.
- ENERGY STAR qualified residential light fixtures use about 67% less energy than conventional fixtures.
- ENERGY STAR qualified computers that meet the new ENERGY STAR specifications use between 30% and 65% less energy than non-qualified models.

When you shop for a new appliance, look for the ENERGY STAR label. By choosing an energy-efficient model, you'll save money and contribute to long-term environmental sustainability in our community.
